CONTENTS OF VOLUME 163

NUMBER 1, JANUARY 1994

TAKESHI SAKAIZUMI AND TAKAYUKI ITAKURA. Microwave Spectrum of *gauche*-Ethyl Selenocyanate 1

A. S-C. CHEUNG, D. K-W. MOK, YAN SUN, AND D. E. FREEMAN. The Potential Energy Curve for the $B^3\Sigma_u^-$ State of Oxygen and Accurate Franck–Condon Factors for the Schumann–Runge Bands 9

K. S. E. EIKEMA, W. HOGERVORST, AND W. UBACHS. On the Determination of a Heterogeneous vs a Homogeneous Perturbation in the Spectrum of a Diatomic Molecule: The $K^1\Sigma^+$, $v = 0$ state of $^{13}C^{18}O$ 19

S. LANGLOIS, T. P. BIRBECK, AND R. K. HANSON. Diode Laser Measurements of H_2O Line Intensities and Self-Broadening Coefficients in the 1.4-μm Region 27

NOBUO NISHIMIYA, TOKIO YUKIYA, AND MASAO SUZUKI. Nuclear Quadrupole Coupling Effect in the $A \leftarrow X$ System and Spectroscopic Constants for $v = 2' \leftarrow 4''$, $3' \leftarrow 5''$, and $4' \leftarrow 5''$ Progressions of ICl 43

CARLOS G. DIAZ AND R. H. TIPPING. The Potential Energy Function for the $X^1\Sigma^+$ Ground State of CO 58

K. CHANCE, P. DE NATALE, M. BELLINI, M. INGUSCIO, G. DI LONARDO, AND L. FUSINA. Pressure Broadening of the 2.4978-THz Rotational Lines of HO_2 by N_2 and O_2 67

BIANCA M. DINELLI, STEVEN MILLER, AND JONATHAN TENNYSON. A Spectroscopically Determined Potential Energy Surface for H_3^+ 71

D. MCNAUGHTON AND E. G. ROBERTSON. The Far-Infrared Inversion Transition of Vinylamine 80

NOBUKIMI OHASHI AND JON T. HOUGEN. Group-Theoretical Treatment of Tunneling Splittings in the Methanol Dimer 86

J. PLÍVA, J. W. C. JOHNS, AND L. GOODMAN. High-Resolution Study of the C–D Stretching Bands of $^{12}C_6D_6$ and $^{13}C_6D_6$ 108

L. NEITSCH, F. STUHL, AND V. STAEMMLER. Comparison of Calculated and Measured Intensities of the P_2 ($C^1\Sigma_u^+$, $v' = 11 \rightarrow X^1\Sigma_g^+$, $v'' = 3$–32) Vibrational Sequence 119

P. BOTSCHWINA, Ä. HEYL, M. HORN, AND J. FLÜGGE. Calculated Spectroscopic Constants and the Equilibrium Geometry of $HCNH^+$ 127

P. B. DAVIES, G. M. HANSFORD, AND T. C. KILLIAN. Diode Laser Jet Spectroscopy of Hexafluorobenzene in the 10-μm Region 138

ROBERT D. GORDON AND J. MICHAEL HOLLAS. Single-Vibronic-Level Fluorescence Spectra of 1,4-Benzodioxan in a Supersonic Jet 159

Y. KABBADJ, T. R. HUET, B. D. REHFUSS, C. M. GABRYS, AND T. OKA. Infrared Spectroscopy of Highly Excited Vibrational Levels of Protonated Nitrogen, HN_2^+ 180

T. R. HUET, Y. KABBADJ, C. M. GABRYS, AND T. OKA. The $\nu_2 + \nu_3 - \nu_2$ Band of NH_3^+ 206

IMTIAZ K. AHMAD AND PETER A. HAMILTON. A High-Resolution Study of the $B^2\Sigma^+$–$X^2\Sigma^+$ Transition of the PN^+ Molecular Ion 214

MIMA STAIKOVA, MILJENKO PERIĆ, AND BERND ENGELS. Ab Initio Investigation of the Hyperfine Structure in the $1^2\Pi_u(X^2A_1, A^2B_1)$ System of BH_2 221

50 721 HI XL 1393
8/94 31249-304

H. BLUHM AND E. TIEMANN. High-Resolution Spectroscopy of KI around the Atomic Asymptote $K(4p\ ^2P_{3/2}) + I(5p^5\ ^2P_{3/2})$ 238
MANFRED BIRK, GEORG WAGNER, AND JEAN-MARIE FLAUD. Experimental Linestrengths of Far-Infrared Pure Rotational Transitions of Ozone 245
MANFRED BIRK, GEORG WAGNER, JEAN-MARIE FLAUD, AND DIETER HAUSAMANN. Linestrengths in the ν_3–ν_2 Hot Band of Ozone 262
M.-A. LEBEAULT-DORGET, C. EFFANTIN, A. BERNARD, J. D'INCAN, J. CHEVALEYRE, AND E. A. SHENYAVSKAYA. Singlet States of ScF below 23 000 cm^{-1}: $X^1\Sigma^+$, $A^1\Delta$, $B^1\Pi$, $C^1\Sigma^+$, $D^1\Pi$, and $E^1\Delta$ 276
DAI-WEI LIAO AND K. BALASUBRAMANIAN. Spectroscopic Constants and Potential Energy Curves for GeF 284
R. BOCQUET, D. BOUCHER, W. D. CHEN, D. PAPOUŠEK, G. WLODARCZAK, AND J. DEMAISON. The Submillimeter-Wave Rotational Spectrum of Fluoroform: Analysis of the $K = 3$ Line Doubling 291
JONATHAN P. TOWLE, ANDREW M. JAMES, ORSON L. BOURNE, AND BENOIT SIMARD. The $C^2\Pi - X^2\Sigma^+$ (0, 0) Band in AlO 300

NOTE

P. CARETTE AND M. BENCHEIKH. Measurements of the Radiative Lifetimes of the $v = 0$ Levels of the $B^2\Sigma^+$ and $C^2\Pi$ States of LaO 309

NUMBER 2, FEBRUARY 1994

C. DEGLI ESPOSTI, F. TAMASSIA, AND G. CAZZOLI. Centrifugal Distortion and Hyperfine Structure Analysis of the Millimeter-Wave Spectrum of Nitrosyl Bromide 313
B. I. ZHILINSKII AND SVEND BRODERSEN. The Symmetry of the Vibrational Components in T_d Molecules 326
C. I. FRUM, J. J. OH, E. A. COHEN, AND H. M. PICKETT. Fourier Transform Infrared Emission and Rotational Spectra of the $X^2\Sigma^+$ States of SrH and SrD 339
G. SPIEGL, W. HÖHE, U. HÄRING, AND W. A. KREINER. Quadrupole Hyperfine and A_1–A_2 Splitting in the ν_2 Fundamental of Arsine 349
I. B. SINGH, S. B. RAI, AND D. K. RAI. Two-Photon Spectrum of *O*-Dichlorobenzene 364
M. ZACKRISSON. The $A^2\Pi_u$–$X^2\Pi_g$ System of Br_2^+ Studied by Velocity Modulation Spectroscopy 371
L. JÓZEFOWSKI, CH. OTTINGER, AND T. ROX. Laser Spectroscopy of the H_2 ($n = 3$ Triplet Gerade) Complex: Vibrational and Rotational Coupling between the Electronic States 381
L. JÓZEFOWSKI, CH. OTTINGER, AND T. ROX. Laser Spectroscopy of the H_2 ($n = 3$ Triplet Gerade) Complex: Fine Structure of the Levels in *para*-H_2 398
CH. OTTINGER, T. ROX, AND A. SHARMA. Laser Spectroscopy of the H_2 ($n = 3$ Triplet Gerade) Complex: Fine and Hyperfine Structure of the Levels in *ortho*-H_2 414
ANNE M. ANDREWS, JOSE L. DOMENECH, GERALD T. FRASER, AND WALTER J. LAFFERTY. Molecular Beam Diode-Laser Spectrum of the ν_3 Band of N_2O_3 at 1304 cm^{-1} 428

KENSUKE HARADA, TOSHINORI WADA, AND TAKEHIKO TANAKA. Near-Infrared Diode Laser Spectroscopy of the (2, 0) Band of the $A^2\Pi_u$–$X^2\Sigma_g^+$ System of the N_2^+ Ion 436

A. S-C. CHEUNG, P. G. HAJIGEORGIOU, G. HUANG, S.-Z. HUANG, AND A. J. MERER. Rotational Structure and Perturbations in the $B^4\Pi$–$X^4\Sigma^-$ (1, 0) Band of VO 443

JOURNAL OF MOLECULAR SPECTROSCOPY

INFORMATION FOR AUTHORS

Manuscripts describing original work in areas of molecular spectroscopy should be submitted to K. Narahari Rao, Department of Physics, The Ohio State University, Columbus, Ohio 43210.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Molecular Spectroscopy* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. As in the past, the Publisher will continue to grant all reasonable requests for permission to reproduce material from contributions appearing in the Journal. However, it is recommended that such requests be first made to the Editor for appropriate action.

Form of Manuscripts. Manuscripts in duplicate should be typewritten with wide margins on high-quality bond paper using double or triple spacing throughout. Copies should include figures, tables, etc.

Each page of the manuscript should be numbered. The first page should contain the article title, author's name, and affiliation. At the bottom of this page, the number of manuscript pages, figures, and tables should be noted. The second page should contain a proposed running head of less than thirty-five characters. It should also contain the name and complete mailing address of the person to whom proofs are to be sent. The third page should contain an abstract.

"Letters to the Editors" will be devoted to the announcement of important results with a minimum of delay. "Notes" will also be published as speedily as possible. Contributions to this section containing "Letters to the Editors" and "Notes" should not exceed 1½ printed pages, including figures, equations, and tables. They should follow the style and form used for manuscripts except that they need not be accompanied by abstracts.

List of Symbols. Authors should submit a complete list of symbols identifying each for the printer. This list will not appear in print.

Tables. Tables are to be numbered consecutively with Roman numerals. The table numbers and titles should be listed on a separate sheet. *Tables will be reproduced as camera-ready copy.* Therefore, they should be carefully and clearly typed since, except for reduction in size, they will appear exactly as submitted. If the tables will be prepared using a word processor or computer, it is recommended that a daisy wheel printer be used. If a daisy wheel printer is unavailable and you will be using a dot matrix printer, it is important that the density of the dots (i.e., the number of dots in the matrix) be sufficient that the numbers do not appear broken. Short tables of one or two pages in length should be typed double-spaced and planned to fit an area of 5 × 8¼ in. after reduction of no more than 40%. Lengthy tables should be typed single-spaced and divided into sections so that each section can fit in the area indicated. *Repeat column headings when dividing tables.* No corrections can be inserted after the line cuts have been made. Do not use a comma to separate groups of 3 digits; merely use a space. For instance: 2,526,000 should be typed 2 526 000. Insert a zero in front of a decimal point when it applies. For instance, instead of .36, use 0.36.

Footnotes to tables should be identified by superscript letters and placed at the bottom of the page containing the table. Footnotes in the text should be identified by superscript numbers and listed consecutively on a separate page.

Equations. Equations should be numbered consecutively with the number placed in parentheses to the right of the equation. Reference to equations should use the form Eq. (3).

References. References should be cited in the text by underlined number in parentheses (in order of appearance). The literature cited should appear on a separate page (double-spaced) and should be listed consecutively according to reference number. Following the reference number, the author's initials, last name, journal name, volume, inclusive pagination, and year (in parentheses) should be listed in that order. Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index,* 1985. For book references give the author's name, name of book, editor's name (if any), edition (if other than first), chapter or page number, publisher's name, place, and year of publication.

Figures. All illustrations should be numbered as figures in sequence with Arabic numerals. Each figure should have a descriptive legend and these should be listed on a separate sheet. Figures should be planned to fit the proportion of the printed page (5 × 8¼ inches), and care should be taken that lettering on the original is large enough to be legible after a reduction of 50 to 60 percent. Illustration copy should measure no larger than 12 × 15 inches. Each figure should be identified in a margin with the name of the journal, author's name, and figure number. Photocopies of figures are not acceptable. Illustrations in color can be accepted only if the authors defray the cost.

Proofs. Proofs will be sent to the author, with reprint order forms. Fifty reprints of each article are granted free of charge, and additional copies may be purchased. Authors will be charged for excessive alterations.

Personal Computer Disks. Manuscripts may be submitted to *Journal of Molecular Spectroscopy* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material and art must also be prepared as camera-ready copy; see the sections on Tables and Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).

An International Journal Designed for the Diverse Community of Users and Developers of Novel X-Ray Imaging and Analysis Techniques

Journal of X-Ray Science and Technology

Editor-in-Chief
Larry Knight
Brigham Young University, Provo, Utah

The **Journal of X-Ray Science and Technology** is designed to provide scientists and engineers with a single literature source covering new developments in the field of x-ray imaging and analysis techniques. Reports of original research and timely reviews of the best technical and esthetic quality will be published.

Research Areas Include

- Applications: analytical, nondestructive testing, microelectronics, biological/medical imaging, x-ray astronomy, materials and surface science
- Interaction of x rays with matter: x-ray phenomena and optical constants
- Sources: synchrotron-generated x rays, x-ray lasers, laser-produced plasmas, novel solid sources
- Optical elements: grazing incidence optics, multilayer mirrors, zone plates, gratings
- Optical instruments: interferometers, spectrometers, microscopes, telescopes, microprobes
- Detectors: CCD arrays, position-sensitive detectors
- Signal processing: coded imaging, tomography
- Related topics and future trends

Volume 4 (1993), 4 issues
In the U.S.A. and Canada: $110.00

ISSN 0895-3996
All other countries: $123.00

Manuscripts may be submitted in quadruplicate to:
JOURNAL OF X-RAY SCIENCE AND TECHNOLOGY
Editorial Office
1250 Sixth Avenue, San Diego, CA 92101

Sample copies and privileged personal rates are available upon request. For more information, please write or call:

ACADEMIC PRESS, INC., Journal Promotion Department
1250 Sixth Avenue, San Diego, CA 92101, U.S.A.
(619) 699-6742

All prices are in U.S. dollars and are subject to change without notice. Canadian customers: Please add 7% Goods and Services Tax to your order.

ENCYCLOPEDIA OF PHYSICAL SCIENCE AND TECHNOLOGY

SECOND EDITION

edited by
Robert A. Meyers

From the Reviews of the First Edition

"Comprehensive, current, easy to use, and authoritative.... It exceeds all of its goals of providing a scholarly encyclopedia covering the physical sciences, mathematics, and engineering. It is highly recommended for large public libraries with a science and technology division, academic libraries, and special libraries with an interest in science and engineering."

—BOOKLIST/REFERENCE BOOKS BULLETIN

"The outstanding feature of this work is the currency of the material covered. This reference tool will serve as a research aid for scholars and advanced students and will find use in academic, special and large and medium-sized public libraries."

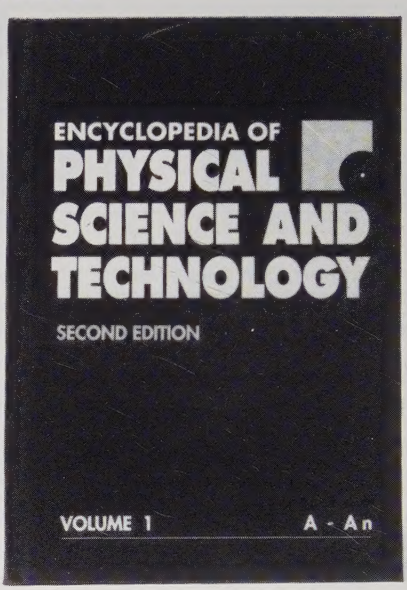
—THE NEW YORK PUBLIC LIBRARY

"I expect it to become a standard in every library attempting to represent broadly the fields of science and technology."

—THE LOS ANGELES PUBLIC LIBRARY

"This encyclopedia will be a very useful and needed addition to the literature of the physical sciences and technology."

—AMERICAN REFERENCE BOOKS ANNUAL



A massive revision of the distinctive **Encyclopedia of Physical Science and Technology**, this **Second Edition** includes 155 new articles that fill three volumes—a total of 2,400 additional pages. This eighteen-volume work maintains the high quality of the original edition, praised by both the Los Angeles and New York Public Libraries. Featuring longer and more complete articles than other similar works and specifically covering all the physical sciences, this encyclopedia deserves a place on every library's bookshelf.

Comparison of the First and Second Editions	*First Edition*	*Second Edition*
Volumes	15	18
Articles	550	705
Pages	11,651	14,080
Bibliographic Entries	5,000	6,500
Figures	6,600	8,500
Tables	1,400	1,800
Illustrations	5,500	8,200
Glossary Entries	6,800	8,700
Index Entries	55,000	70,000
Chemical and Mathematical Equations and Algorithms	13,850	17,625

Key Features

- Articles are arranged alphabetically for easy access
- Each entry begins with a detailed table of contents, a glossary of unusual terms, and a concise definition of the topic, followed by an in-depth presentation
- Extensive cross-references
- Each article has passed a review by its author's peer group
- 92% of the articles have been revised and updated
- 155 articles have been added

Eighteen-Volume Set
1992, 14,080 pp., $2500.00/ISBN: 0-12-226930-6
